Select Computing INCORPORATED

Providing Innovative Solutions

Your trusted strategic partner for digital transformation
Office : 612-331-5535 | BD@selectcomputing.com

What We Do

Systems Modernization
Our systems modernization identifies three approaches: process-driven, data-driven, and codebase reconditioning. These approaches are used to assist in system modernization projects for various Federal agencies and the State of Minnesota.

Cloud Migration
Our approach to cloud migration involves a comprehensive and structured process to ensure a seamless transition with minimal disruption to operations.

Agile Practices
Our Agile approach engages our clients in iterative development, continuous feedback, and adaptive planning. We prioritize user needs by engaging stakeholders and end-users early and often to gather requirements and feedback.

Service Management
Our Service Management approach is focused on industry best practices and frameworks, with a focus on Information Technology Infrastructure Library (ITIL).
